## Lesson 1: Let's Think

## Mark says $\frac{1}{3}$ and $\frac{3}{9}$ are the same. Is he correct? How do you know?

## Lesson 1: Let's Apply

Which of the fractions below are NOT equivalent to $\frac{2}{5}$
$\frac{1}{10}$

$\frac{10}{25}$
$\frac{6}{15}$
$\frac{9}{20}$
$\frac{12}{30}$
$\frac{14}{30}$
$\frac{18}{40}$
$\frac{17}{35}$

## Lesson 2: Let's Think

## Lily says that $\frac{4}{16}$ could be written as a fraction with a lower denominator.

Is she correct? What fraction does Lily mean?

## Lesson 2: Let's Apply

How many different equivalent fractions can you find for $\frac{4}{12}$ ?

Can you find any fractions that are equivalent but have a denominator that is lower than 12?
